

Empowering innovation through customer engagement

T-DOC version 18 introduces powerful new features designed to streamline workflows, provide guidance for staff, and elevate patient safety standards.

T-DOC in your pocket

Streamline your stock processes by managing paperless order picking with the new T-DOC Mobile Client supporting on-time delivery for surgeries*.

Advanced endoscope management

Gain complete control over endoscope reprocessing with flexible sterilization options, new quarantine rules to enhance safety, and vacuum sealing to extend lifespan and reduce wear.

Split ordering & prioritized factories

Split dynamic preference lists into multiple orders across multiple factories and prioritize these for improved efficiency and timely delivery for surgical procedures.

Business Intelligence (BI) dashboards

Empower data-driven decision-making with comprehensive dashboards that track performance, identify inefficiencies, and help achieve department KPIs.

Count-based fast tracking

Automatically fast track units based on storage counts, ensuring the best conditions for fulfilling customer orders and instrument availability.

Loaner equipment management

Simplify the handling of loaner trays with enhanced registration and tracking features, ensuring accurate usage records and better guidance for staff.

Integration with oneSOURCE

Access up-to-date instruction manuals and safety data directly within T-DOC, ensuring correct handling and enhancing regulatory compliance.

New connected equipment support

Expand your connectivity with a broader range of sterilizers, washers, and other critical equipment, ensuring seamless integration and improved operational efficiency.

Discover more features

While these are some of the standout features of T-DOC version 18, there are many more enhancements designed to meet the diverse needs of our users.
